

Singapore Healthcare Management 2017

# Secured File Sharing and Collaboration through Partners' Portal

Karin Lin Dewei, GPO, SingHealth  
Wong Weng Foo, GPO, SingHealth

## Project Aims

- Creating a **secured Web-based Repository** database Application
- For **storing, sharing and collaboration** of procurement information
- Partnership with **Internal (SingHealth) and/or External users** (Vendors and Non-SingHealth users) through secured access login.

## Benefits

- Secured Repository
- Permission Access controlled
- Collaboration with stakeholders

## Methodology

Portal requires access login and each login is newly created

Portal is divided into two broad categories: Pharma & Non-Pharma

Document is further sub-categorized by Project title & Vendor

Permission access can be granted by folder or file level to authorised users

Portal can be accessed through any Internet browsers

## File Sharing

## Results

- System gone live since Apr 2017
- A safe and secured web-based application to share huge documents without the need to encrypt documents and send via encrypted thumb drive or send confidential information via email to unauthorized recipients
- Vendors are ensured that their information will not be accessed by any unauthorized users

## Conclusion

- Partner's portal is an easy and highly configurable Document Management system that can be accessed by anyone, anytime, anywhere and any computer with an authorized account login in a secured environment.
