# One System for all Products: Universal Bracket Mount System Research 

## Alba Chliakhtine, Director Procurement

Singapore Healthcare Management 2014

A dynamic market is a key attribute of a high-performing supply chain. Through Health Purchasing Victoria's (HPV) role in managing collective contracts for Victoria's hospitals, it identified a practical product innovation opportunity to support health services \& encourage a level-playing field for suppliers

## AIMS

- Create a 'supplier-agnostic' universal bracket mount system to enable a smoother transition for health services to accept products from new suppliers
- Remove need to repeatedly install bespoke wall mounts \& reduce environmental impact
- Reduce time taken to transition to new suppliers therefore enabling health services to start using better-value products sooner
- Practically support a 'level-playing field’ for new suppliers in the market
- Free up health service resources to focus on supporting and delivering primary care

## METHODOLOGY

Collate aggregated data from health services from HPV Hand Hygiene contract to identify potential cost savings.

Engage and brief University of Melbourne Engineering students on project requirements; identify pilot health service and establish project steering committee.
Maintain regular communication with pilot health service to refine product requirements throughout project.

## NEXT STEPS / CONCLUSION

- Research commercialisation opportunities for this product and validate costs with health services
- Seek funding for a test health service

## KEY RESULTS

$\checkmark \quad$ Two working prototypes in wall matrix or product tile variant produced
$\checkmark \quad$ Prototypes tested in clinical settings

Product tile $100 \mathrm{~mm} \times 100 \mathrm{~mm}$ Distributed to medical manufacturer

## Wall matrix

can occupy $100 \mathrm{~mm} \times 100 \mathrm{~mm}$ wall area. Flexibility to cut smaller area from size.

Supplier hand hygiene products installed directly on product tiles
