Singapore Healthcare  
Management 2018

## Aim

Multiple standalone IT systems across healthcare institutions were hastily built during SARS for healthcare workers (HCW) surveillance. Over the years, the systems' technology have also become obsolete, resulting in laborious and manual processes to retrieve HCW data, impeding response speed towards disease and nosocomial outbreaks.

To further enhance patient and staff safety, a robust and operationally-compatible national system is needed to replace the existing systems, and serve as a one-stop, centralised HCW records database to facilitate surveillance, detection and response during outbreaks.

The project aims were as follows:

- Plan and validate system requirements and functionalities to build a robust and operationally-compatible Staff Health Surveillance System (S3)
- Build healthcare outbreak management capability to enable timely detection and response

## Methodology

Sep 2016 – Dec 2016

Jan 2017 – Sep 2017

Oct 2017 – Mar 2018

Mar 2018 – Jun 2018

Apr 2018 – Ongoing

### Information Gathering

- Define scope of system
- Develop questionnaires to understand SingHealth institutions' policies, guidelines and processes for HCW records management
- Identify gaps and issues for resolution by relevant policy-making platforms

### Requirements Gathering & System Development

- Gather and synchronise requirements from SingHealth institutions
- Resolve conflicting cluster requirements
- Propose system functionalities and specifications for system development by IHIS

### System Testing & Issues Prioritisation

- Validate system functionalities, system design and user interface through User Testing
- Review and prioritise all system issues for immediate resolution or long-term enhancements

### System Governance & User Access

- Conceptualise system governance and user access framework
- Conduct user engagement sessions and develop materials to facilitate institutions' user access set-up

### Data Migration, System Transition & Implementation

- Propose data migration strategy and system transition plans for systems to be replaced by S3
- Develop system implementation plan, including user trainings, user guides, roadshows and presentations to management platforms

## Results

S3 was developed as a national system spear-headed by the SingHealth HCW Surveillance Workgroup, completing the various steps outlined in the methodology. The system went technical-live in April 2018 and will transit to operational-live in July 2018, achieving the following project aims:

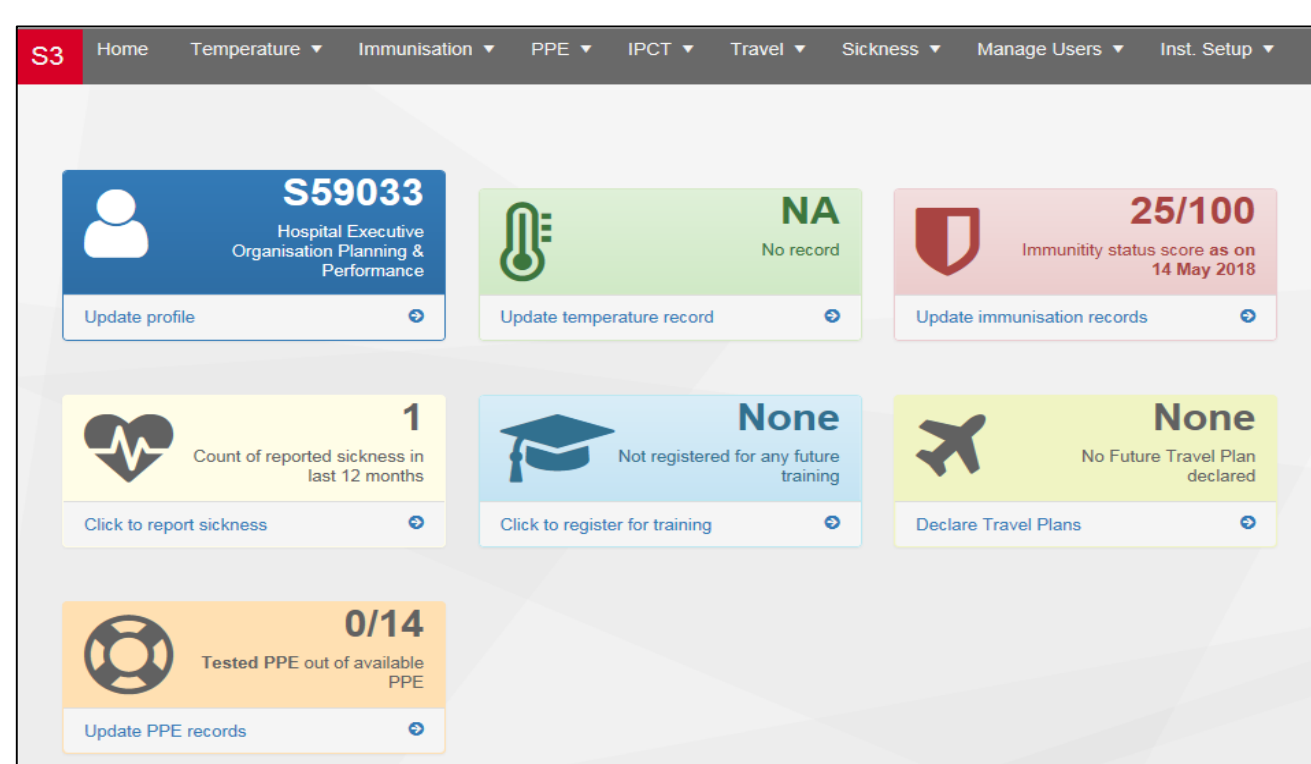

### (1) Robust and Operationally-Compatible S3

#### 1a. Universal S3 Access by HCW (Fig.1)

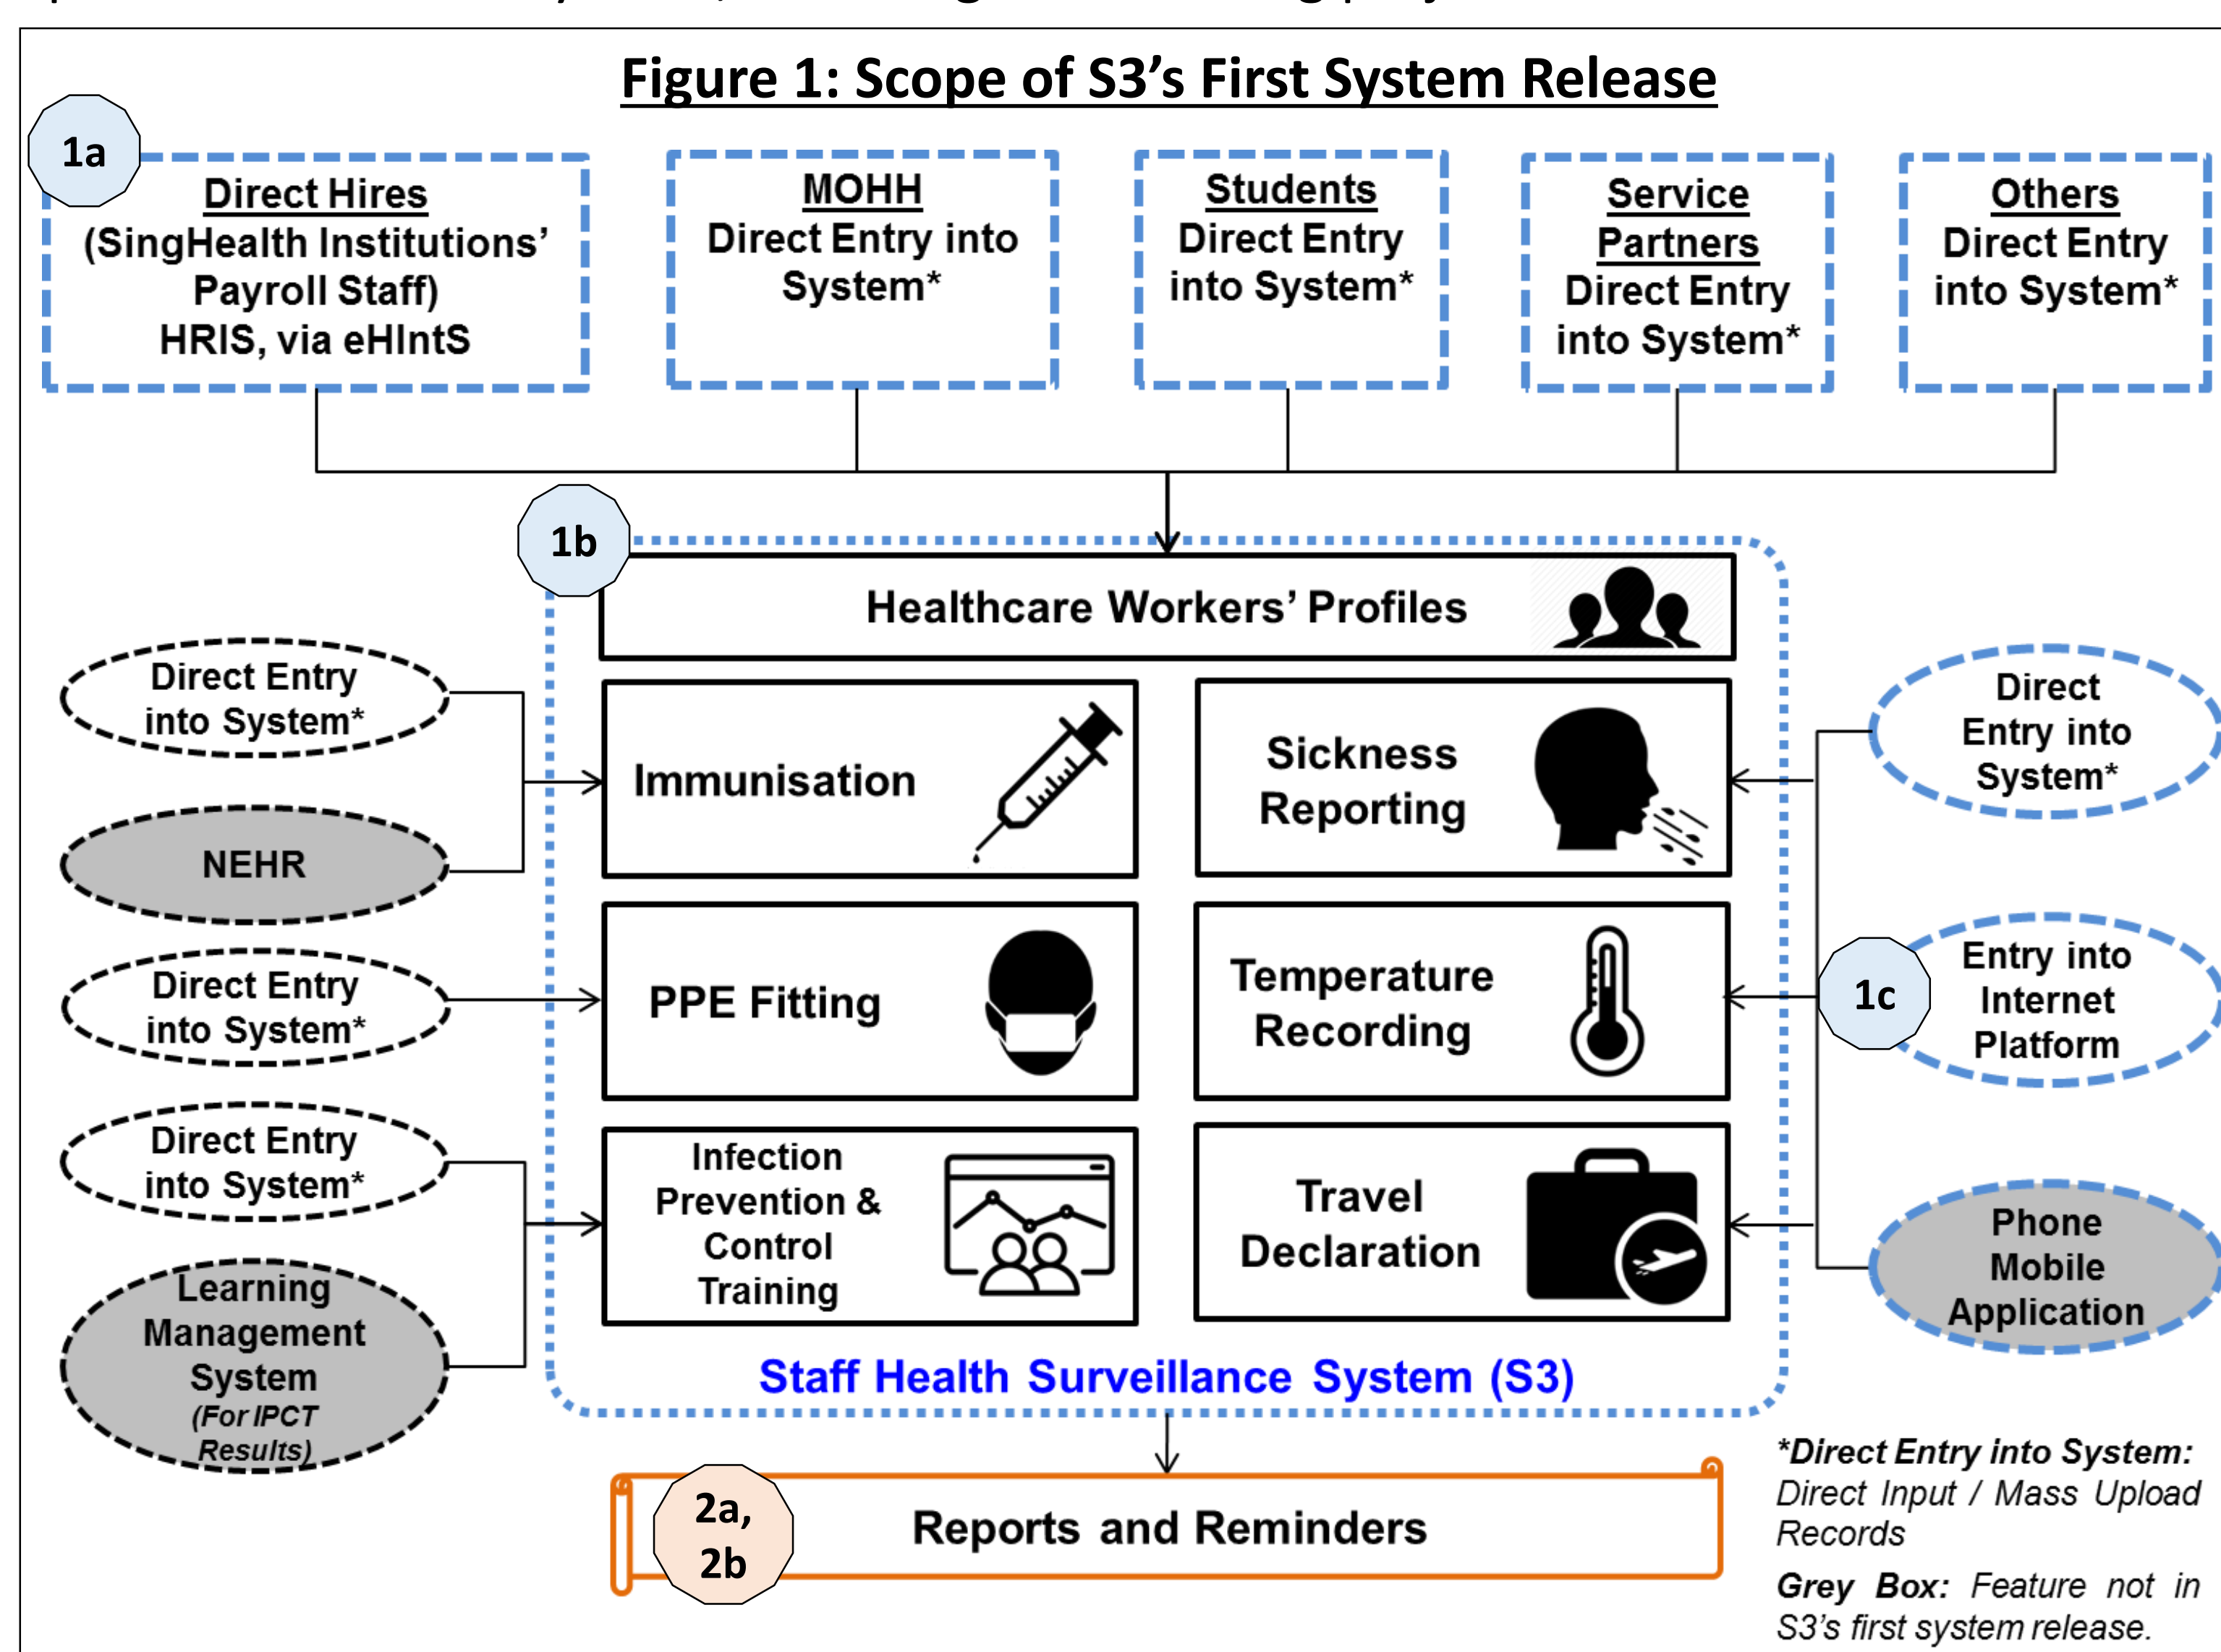

- NRIC/FIN number as staff identifier
- Payroll staff details interfaced and updated daily from SingHealth HRIS
- Inactive payroll staff records are automatically archived
- Plan to explore interfacing non-payroll staff profiles from existing system(s)

#### 1b. Centralised Records Database (Fig.1)

- S3 is a one-stop database for HCW Immunisation, Temperature, Sickness, Travel, Personal Protective Equipment (PPE) and Infection Prevention and Control Training (IPCT) records
- S3 Dashboard:

- Plan to explore interfacing records from existing source system(s) for e.g.
  - National Electronic Health Records (NEHR) for Immunisation records
  - Learning Management System (Wizlearn) for IPCT records

- Records Upload Function and Mass Upload Template:
  - Sample data and colour-coded fields to facilitate input of data in required format

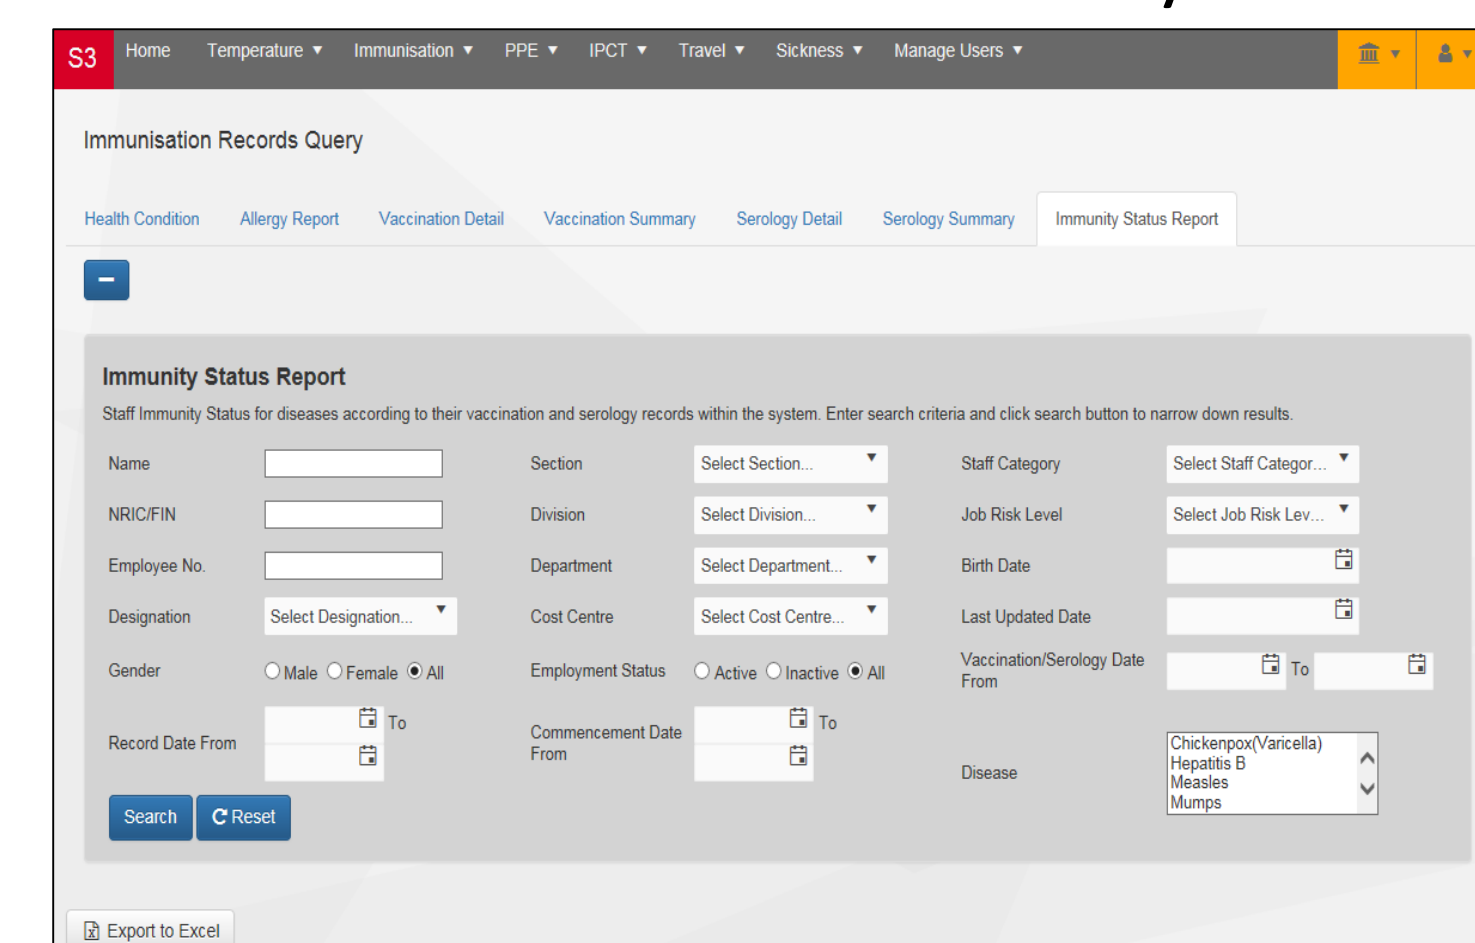

NRIC/FIN	Vaccination	Vaccination Date	Batch No.	Vaccination Result	Location	Location (Others)
Eg. S6666667	Hepatitis B	25/01/2017	111			

Red – Mandatory fields  
Blue – Non-mandatory fields  
Yellow – Sample data

### (2) Enhanced Healthcare Outbreak Management Capabilities

#### 2a. Reports (Fig.1)

- Wide range of report filters for reports generation from each module
- S3 Immunity Status Report:
  - Pre-configured algorithm of HCW vaccination and serology status to determine disease immunity status

#### 2b. Automated Reminders (Fig.1)

- IPCT Courses
- Temperature Recording
- Vaccination, with configurable schedule

Staff No.	Vaccination/Temp	Dose/Date	Location	Result	Temp	Sickness	Travel	IPCT
1	Mumps/Mumps-Rib.	Dose 1	Mumps	30	30	30	30	30
2	Mumps	Dose 1	Mumps	2	2	2	2	2
3	Mumps	Dose 1	Mumps	2	2	2	2	2
4	Rubella	Dose 1	Rubella	3	3	3	3	3
5	Varicella	Dose 1	Varicella	30	30	30	30	30
6	Influenza	Dose 1	Influenza	15	15	15	15	15
7	Hepatitis B	Dose 1	Hepatitis B	5	5	5	5	5
8	Hepatitis B	Dose 1	Hepatitis B	4	4	4	4	4
9	Hepatitis B	Dose 1	Hepatitis B	6	6	6	6	6
10	Hepatitis B Antibodies	Final	Hepatitis B Antibodies	Final	Final	Final	Final	Final

## Conclusion

S3 is a system that aids early detection, staff surveillance and efficient implementation of responses during outbreaks. While the first version of S3 is in place, further enhancements are needed to expand the scope of HCW information interfaced from other systems, improve system versatility and user-friendliness.

**Acknowledgement:** The project team would like to thank the SingHealth HCW Surveillance Workgroup Co-Chairpersons (A/Prof Loo Chian Min & A/Prof Tan Ban Hock), Sub-Workgroup Leads (Ms Tan Li Na, Mr Chong Pang Boon, A/Prof Thoon Koh Cheng, Ms Irene Han, Dr Ling Moi Lin & Ms Eunice Loh), Members and IHIS Project Team (Mr Dai Yong & Mr Pushpendra) for their guidance, feedback and support.
