National Heart Centre Singapore SingHealth

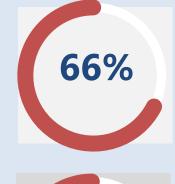

# BACKGROUND

Patients are getting more complex in their care upon discharge. Definition of patients with complex care are patients who are unsuitable for step-down care in any institutions.

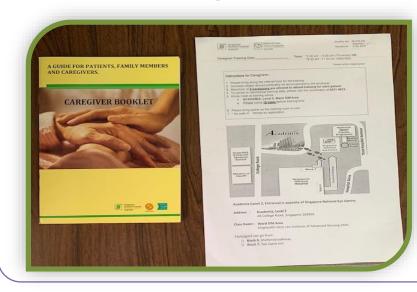

#### **Previous Situations**

**Nurses** took more than 1 hour to discharge patients with complex care on discharge day

More than 50% of **nurses** shared that discharging complex care patients requires a lot of logistics planning and coordination prior to the actual discharge day

in view that they are supported on special medical devices or treatments e.g. patients discharged with feeding tubes, tracheostomy and assistive devices. Hence, they need to be discharged to home with the help of caregivers.

Caregivers were typically sent to Academia for Caregiver Training (CGT); with the cessation of CGT at Academia in Jan 2019, individual wards were tasked to provide teaching support to caregivers. The basic skills taught, did not meet complex needs of the complex case cardiac patients.

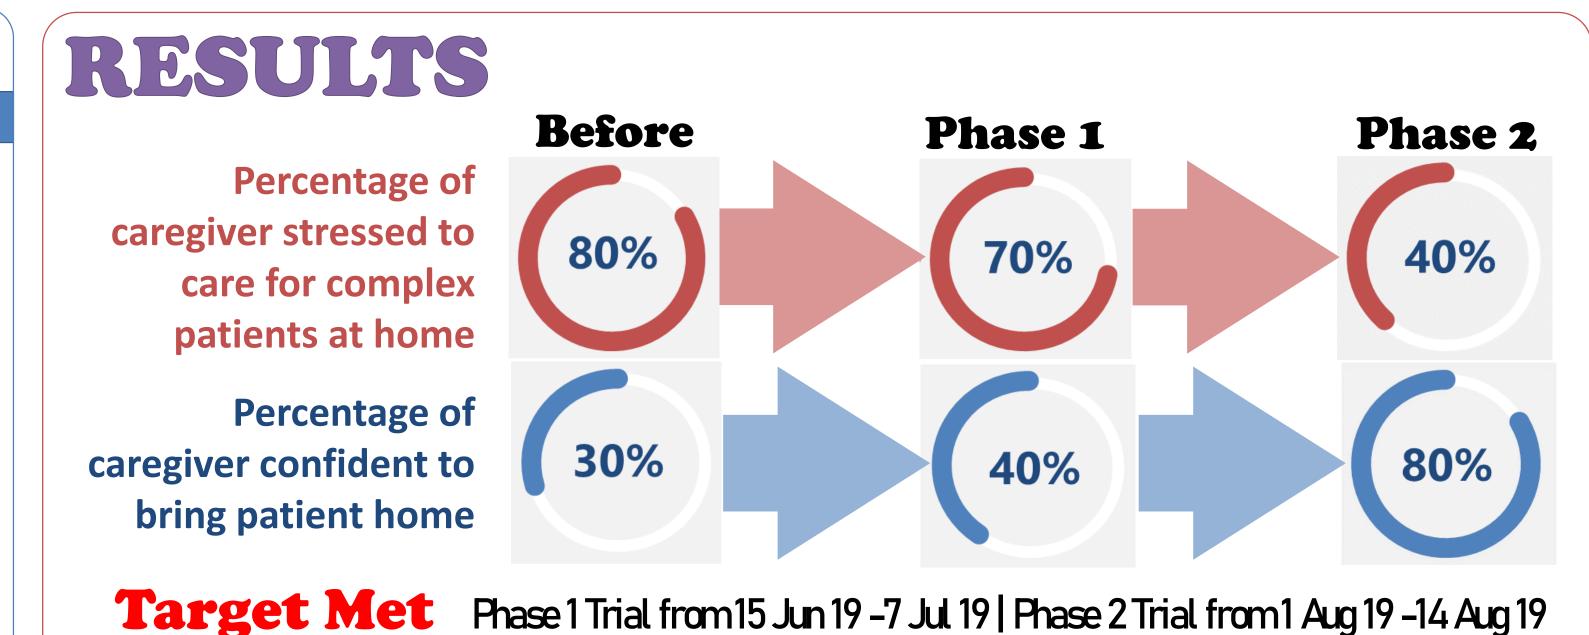

**Caregiver** felt stressed to bring patients home with complex care needs

80% Caregivers Confident In Taking Care Of Complex **Care Patients At Home** 

80% Complex Care Patients Complete Discharge **Process Within 1 Hour On Discharge Day** 

80% Caregivers Confident In Taking Care Of Complex Care Patients

# METHODOLOGY

KEY INNOVATIONS IMPLEMENTED						
	Redesigned workflow	Structured discharge teaching guideline for nurses Ensures important information given to patient/caregiver				
2	Team designed discharge checklists	Holistic teaching material is easy to understand Teachings on Different aspects of nursing care Catered for complex patient's needs				
3	Developed Discharge Folder	Patient given complete discharge information Teaching slides are compiled into one folder Tailored for individual patient's needs				
	Developed in-house	Early discharge planning = Caregivers have ample time				

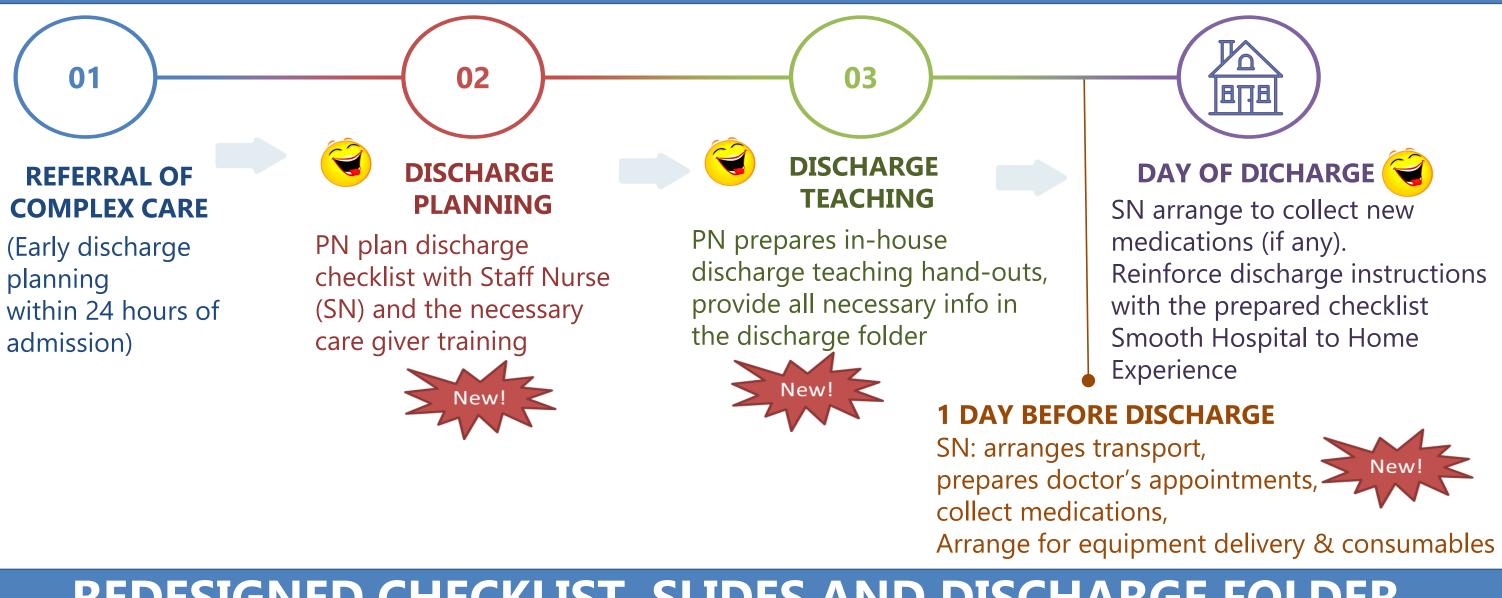

**Developed in-house** 

Nurses prepare discharge arrangements in advance

to prepare for discharge of patient to home

#### **ENHANCED WORKFLOW**

### **REDESIGNED CHECKLIST, SLIDES AND DISCHARGE FOLDER**

Discharge Che	ecklist
---------------	---------

#### **Checklist and structured** guidelines for caregiver to follow up includes:

- NGT feeding
- Elimination (Urinary & Bowel)
- Blood Glucose Monitoring
- Skin Care & Protection
- Tracheostomy & Suctioning

### 95% Complex Care Patients Complete Discharge Process Within 1 Hour

The increase in caretakers' confidence to care for patients at home had led to a **Decrease in Waiting Time to Discharge and a Reduction in Length of Stay.** 

	2019	2020		
No. of Complex Cases discharged	10	10		
Length of stay	2 weeks – 12 months	2 weeks – 13 months		
Waiting time to go home	38 days	28 days		
Unscheduled Readmission	0	0		

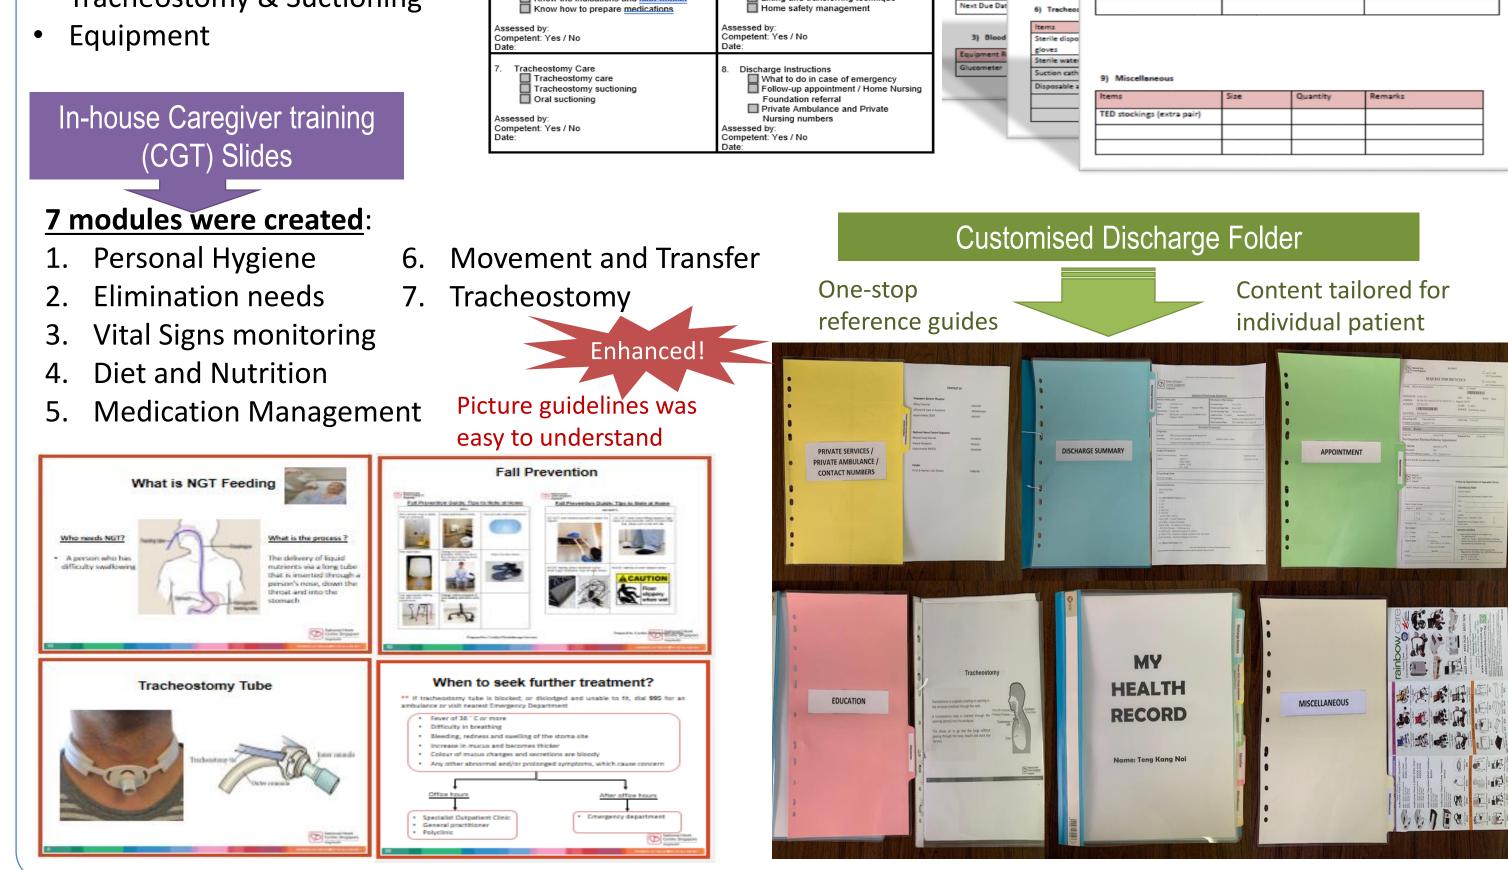

### **Intangible Benefits**

- Patient and caregivers receive standardised teaching
- Increase patient & caregiver satisfaction and experiences
- Improved teamwork and work efficiency amongst staff
- NHCS as a preferred healthcare organization
- Supports NHCS strategic objective: Improving care for all patients

"I am more confident to bring my mom

home after the caregiver training"

"Comprehensive information were provided in 1 folder and it was very useful to carry around"

me precious time organizing my patient's discharge. I am very confident that I will not miss out on any discharge instructions that is required for my patients"

"The discharge checklist had saved

" My patients are able to be discharged safely and timely"

## SUSTENANCE

66)

- Regular audit to ensure staff are aware of sourcing for the teaching slides  $\bullet$
- Training for existing and new staff  $\bullet$
- Continuous monitoring of patient and nurse satisfaction
- Monitoring of improved time of discharging patients with complex care
- Regular feedback with staff on implementation
