

PHARMACIST MEDICATION INTERVENTIONS - CLOSING THE LOOP

Shyamala Narayanaswamy, Huey Min Kam, Jenny Ng
Department of Pharmacy, Singapore General Hospital

INTRODUCTION

When pharmacists perform medication interventions, the usual practice is to contact doctors to verbally confirm changes and dispense the amended orders to patients. Pharmacists document the interventions in Sunrise Clinical Manager (SCM) which will alert doctors when intervened orders are re-prescribed. If doctors do not update the order or disregard the SCM alert, prescribing errors can arise.

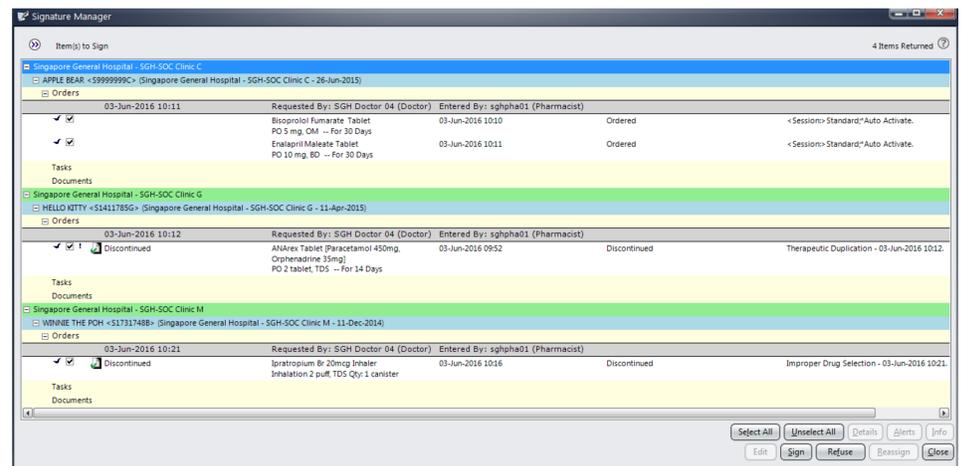

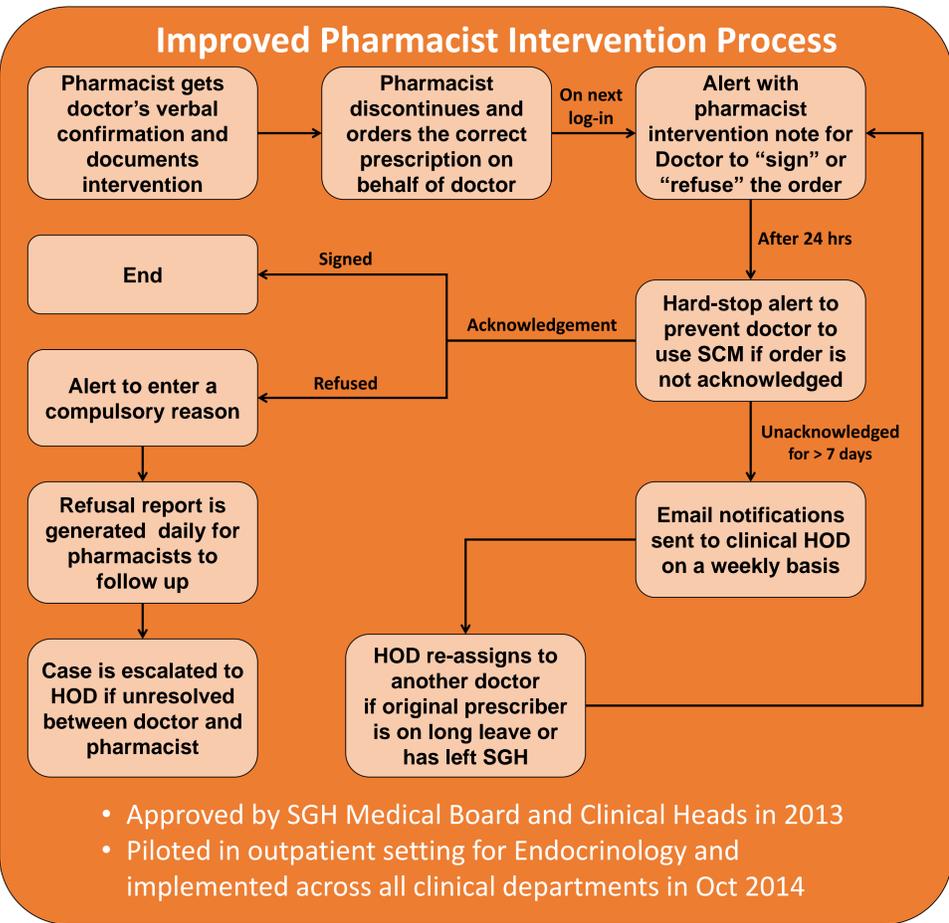

In 2013/2014, five medication errors reached patients due to uncorrected orders.

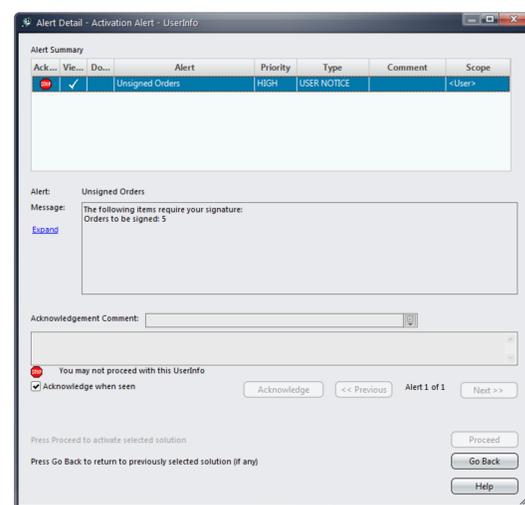

OBJECTIVE - To reduce medication errors due to uncorrected orders after pharmacist interventions.

METHODOLOGY

SGH Medication Safety Committee and SingHealth Medication Core Clinical Design Team developed a workflow process to close the pharmacist intervention loop.

Alert with pharmacist intervention note for Doctor to "sign" or "refuse" the order

Hard-stop alert to prevent doctor to use SCM if order is not acknowledged

RESULTS

Out of 20,824 outpatient pharmacist interventions in 2015:

Orders discontinued by pharmacists	Order on behalf by pharmacists	Acknowledgements refused by doctors
7,931	10,166	18 (0.1%) *

* All refused acknowledgements were resolved after clarifications

Medication errors due to uncorrected orders after pharmacist interventions have dropped to **ZERO** since full implementation!

CONCLUSION

- This workflow improvement has closed a critical gap in the medication use process, resulting in timely and accurate updates to medication records
- It has allowed compliance with regulatory requirements to furnish a prescription within 24 hours of medication supply following a verbal order
- This simple yet effective solution can be implemented in other healthcare institutions in Singapore

ACKNOWLEDGEMENTS:

The authors are most thankful for the wholehearted support from our hospital management, our IT colleagues from IHiS, and especially all Pharmacists at SGH!
